Write-up Penyelesaian

1. Langsung saja kita menggunakan stegseek untuk mengextract output dari file .wav dan mengecek tipe file output nya yang ternyata merupakan sebuah zip file

```
┌──(kali㉿kali)-[~/Downloads/SRIFOTON]
└─$ stegseek transmission.wav
StegSeek 0.6 - https://github.com/RickdeJager/StegSeek

[
i] Found passphrase: ""
[i] Original filename: "final_arsip.zip".
[i] Extracting to "transmission.wav.out".

┌──(kali㉿kali)-[~/Downloads/SRIFOTON]
└─$ file transmission.wav.out
transmission.wav.out: Zip archive data, made by v3.0 UNIX, extract using at least v1.0, last modified Jul 27 2025 12:35:00, uncompressed size
 5128, method=store
```

2. Dan kita extract menggunakan binwalk

```
┌──(kali㉿kali)-[~/Downloads/SRIFOTON]
└─$ binwalk -e transmission.wav.out

DECIMAL       HEXADECIMAL     DESCRIPTION
--------------------------------------------------------------------------------
0             0x0             Zip archive data, at least v1.0 to extract, compressed size: 5128, uncompressed size: 5128, name: arsip_rahasia
.zip
5203          0x1453          Zip archive data, at least v1.0 to extract, compressed size: 232, uncompressed size: 232, name: arsip_rahasia2.
zip

WARNING: One or more files failed to extract: either no utility was found or it's unimplemented
```

3. Lalu kita coba buat cek isi dari folder yang terlah kita extract dan menemukan 2 file zip

```
┌──(kali㉿kali)-[~/Downloads/SRIFOTON]
└─$ cd _transmission.wav.out.extracted

┌──(kali㉿kali)-[~/Downloads/SRIFOTON/_transmission.wav.out.extracted]
└─$ ls
0.zip  1453.zip  arsip_rahasia2.zip  arsip_rahasia.zip
```

4. Sebelumnya, kita coba menerjemahkan kode morse dari file .wav tadi dengan sedikit bantuan gpt yang ternyata merupakan password dari arsip_rahasia.zip yaitu EV4CU4TE7 dan kita berhasil mengextract untuk mendapat password arsip_rahasia2.zip dan flag bagian pertama

```
┌──(kali㉿kali)-[~/Downloads/SRIFOTON/_transmission.wav.out.extracted]
└─$ unzip arsip_rahasia.zip
Archive:  arsip_rahasia.zip
[arsip_rahasia.zip] secretMessage1.txt password:
password incorrect--reenter:
 extracting: secretMessage1.txt
  inflating: PW2.png

┌──(kali㉿kali)-[~/Downloads/SRIFOTON/_transmission.wav.out.extracted]
└─$ cat secretMessage1.txt
SRIFOTON{13_N0v3mb3r_
```

5. Karena file PW2 merupakan .png jadi kita langsung aja menggunakan zsteg yang ternyata berisi password untuk membuka arsip_rahasia2.zip. Langsung kita coba buka arsipnya dan kita menemukan file secretMessage2.txt yang berisi bagian kedua dari flagnya

```
┌──(kali㉿kali)-[~/Downloads/SRIFOTON/_transmission.wav.out.extracted]
└─$ zsteg PW2.png
meta Comment         .. text: "Password 2 : GARUDAANGKASA"

┌──(kali㉿kali)-[~/Downloads/SRIFOTON/_transmission.wav.out.extracted]
└─$ unzip arsip_rahasia2.zip
Archive:  arsip_rahasia2.zip
[arsip_rahasia2.zip] secretMessage2.txt password:
password incorrect--reenter:
 extracting: secretMessage2.txt

┌──(kali㉿kali)-[~/Downloads/SRIFOTON/_transmission.wav.out.extracted]
└─$ cat secretMessage2.txt
2026_K14m4t_H04x}

┌──(kali㉿kali)-[~/Downloads/SRIFOTON/_transmission.wav.out.extracted]
└─$
```
